

Balloon Tower

Subject: Science

Grade Level: 3-5

Concept: Economic Concepts

Method: Design Thinking

OVERVIEW

The object of the lesson is to build the tallest, most cost effective balloon tower. The balloons cost .25 each. Groups may buy up to 20 balloons, but less is best. Tape may be used to keep the balloons together, but the tower must be free standing. Students can purchase balloons, but they can not return unused balloons.

Connection to Entrepreneurship: Students will design, create, and build a balloon tower. Materials for the build will have a cost.
